Nuke Cancer from 9/11 Revealed

By [Gordon Duff](#) and Press TV

A new and terrifying 9/11 conspiracy has hit the news. We are now confronted, not only with

startling proof that 9/11 was a “nuclear event,” but that there have been thousands of unreported deaths in New York, radiation cancers and nearly 70,000 being kept alive with experimental stem cell therapy and physically devastating “chemo.”

One of the biggest medical cover-ups in history was exposed this week when Wall Street brokers suffering from cancer after 9/11 made the news. While telling their story, the New York Post revealed that 70,000 New Yorkers have applied for 9/11 victim compensation, most for cancers that can only be attributed to direct exposure to ionizing radiation from nuclear weapons.

Officials would not give a breakdown of cancer victims, but 10,800 downtown workers make up the second-largest group of registered claimants after 39,500 Ground Zero responders. There are another 16,600 in smaller categories such as residents, students, child-care and health-care workers.

Finance workers engulfed in dust and debris from the Twin Towers’ collapse say the attacks — and returning to Wall Street a week later, when officials insisted it was safe — triggered their diseases.”

There is no other established cause, not “toxic soup” or irradiated drywall. In fact, the 70,000 victims represent the largest cancer cluster in history, even more victims than survivors of both Hiroshima and Nagasaki combined, the only other similar “spike” of multiple myeloma cases.

Of the 70,000 victims, over 90% say they were exposed within a one-square-mile area. Yet the cover-up has been so thorough that only one death has been “officially reported” and only a small number of victims have been paid compensation due to a “system” ripe with denial, disinformation and corruption.

NUKES, NOT PLANES AND PANCAKES

The official cause of the collapse of the three towers at the World Trade Center was a terror attack involving two airplanes. We are told that the towers simply collapsed because they were built without a central core and heat had weakened the steel on the poorly designed structure.

Studies by Architects and Engineers for 9/11 Truth, however, tell a different story, that of the most powerful buildings on earth with massive steel cores and a design capable of withstanding aircraft crashes, earthquakes or fires without significant structural damage.

The third tower, Building 7,”simply fell for no apparent reason. No answers were given and when questions were asked, the answer was “Building what?”

The “official report” simply made it all up, junk science and perjured testimony. For the cancer victims of 9/11, the lying is still going on.

Were one or more of the three towers destroyed on 9/11, the victim of “nuclear demolitions?” An article in the New York Post outlining the largest “cancer cluster” in history may well do exactly that.

WHERE THE “NUKE” CLAIMS COME FROM

Recently, stories attributing the destruction of the World Trade Center to “nano-thermite” were spread across the news. They originated from “Gawker,” a website for New York-based media insiders.

The first time nuclear weapons were mentioned involving 9/11 was when former Soviet nuclear intelligence officer, Dimitri Khalezov, wrote of being briefed by his government that nuclear demolitions had been planted under the World Trade Center.

Khalezov told of a September 12, 2001 meeting with Mossad operations chief Mike Harari and other Israeli intelligence specialists including Harari's son.

At a celebratory brunch in Bangkok, according to Khalezov, the Israelis took credit for the planning and execution of the 9/11 attacks. Khalezov presented proof, including a copy of Harari's passport, issued under a false identity but with a clearly recognizable photo.

In 2007, a team of FBI agents flew to Bangkok to interview Khalezov. Their investigation was of specially built aircraft they said crashed into the twin towers, each containing, according to the FBI, a small nuclear weapon.

They also interviewed Khalezov about the Pentagon attack and his belief that a stolen Granit missile had been used.

According to authoritative sources, "Lord of War," Victor Bout, the CIA gun runner portrayed by Nicholas Cage in the film, Lord of War," was extradited to the United States where he is imprisoned, not for the charges the public is told of, but for supplying the missile used to attack the Pentagon.

No mention is made of who Bout's co-conspirators were.

In 2010, sources within the Defense Intelligence Agency began working with an operational hypothesis that the twin towers were destroyed with advanced "neutron-like" weapons that left no radiation signature. They believe that multiple weapons were used, not only in the towers themselves but in the subbasement as well.

Reports by investigative journalist Jeff Prager outlining underground fires lasting months along with the almost total lack of wreckage is seen by many as a very strong confirmation of the DIA hypothesis.

THE CONTINUING COVERUP

After 9/11, tens of thousands of Americans developed cancer. Many died but no one will ever know how many. That number is, for some reason "classified."

By 2006, the Village Voice had begun to write about the cancer epidemic and Dr. Larry Norton of Sloan Kettering Memorial Medical Center cited that something in the dust may have caused the cancer outbreak. Norton demanded a detailed study be funded, but no study followed.

In fact, there was never any evidence that the "toxic dust" was, in fact, any different than what New Yorkers had been breathing for decades. Why should it have been?

They had been demolishing buildings in Manhattan for a century. Then the reports became more bizarre.

Stories were circulated that the World Trade Center was built with Chinese drywall containing radioactive phosphor-gypsum. However, no "Chinese drywall" had been imported to New York at that time nor was any used in the World Trade Center construction.

Then again, there is no evidence that small amounts of radiation could have caused the massive spike in cancers, with up to 70% of the tens of thousands of first responders suffering according to Dr. Norton.

THE "NUCLEAR TEST" CANCER

The cancer is multiple myeloma. Victims are told they got it from breathing "toxic soup" from 9/11, mostly drywall dust. The number of victims who have thus far applied for benefits from the 2.7-billion-dollar 9/11 fund, as reported in the New York Post story, that number is 69,900. There is one known direct cause for this disease, exposure to a nuclear explosion. Multiple

myeloma is also known as “the Hiroshima disease.”

Studies at both Los Alamos and Livermore Labs show little increase, no more than 4%, for minor radiation exposure. There are no other established factors, no “toxic soup” that can cause this disease.

From Cancer Compass:

“Some research suggests that there are certain multiple myeloma risk factors increase a person’s chance of getting multiple myeloma. Farmers and petroleum workers exposed to certain chemicals also seem to have a higher-than-average chance of getting multiple myeloma. In addition, people exposed to large amounts of radiation (such as survivors of the atomic bomb explosions in Japan) have an increased risk for this disease.”

In 1988, Congress established (Radiation Exposed Veterans Compensation Act Pub. L. 100-321) those diseased attributed to ionizing radiation from nuclear explosions. Listed as “Number 2” under leukemia is multiple myeloma.

WE’VE SEEN IT BEFORE

After the Vietnam War, veterans began dying of a series of diseases, including cancers typically tied to dioxin exposure. However, the government denied that it had used any form of chemical that could have been responsible.

After a series of commissions, lawsuits and investigations, it wasn’t until 1991 when the US government admitted that Agent Orange had already killed as many as 100,000 veterans. Were they diagnosed and treated using information the government withheld, many if not most would be alive today.

Gulf War Syndrome is an almost identical abuse with over 10,000 deaths and a government that waited 20 years to admit a problem existed, as before, only after most of those who could have been diagnosed and treated successfully using withheld information were already dead.

An identical situation exists in New York. Perhaps the most insidious part is the obfuscation regarding non-specific “toxic dust” as a causation. Withheld information has led to over a decade of purposeful misdiagnoses with medical professionals fearful of being charged as “conspiracy theorists” if they develop and treat patients in accordance with established procedures involving radiation exposure.

Instead, tens of thousands have developed statistically impossible diseases with the vast majority misdiagnosed for years.

Today, 70,000 survivors of 9/11 have cancer. There is no official cause other than “toxic soup,” a term any medical researcher would cringe upon hearing.
